KNOW YOUR HEART AGE

Smoking, being overweight, high blood pressure and cholesterol, excessive alcohol and lack of exercise all add up over time and increase your future chances of having a heart attack, stroke or developing certain types of dementia.

Most people know their vital statistics like height, weight and waist size. That's a good start. But do you know your heart age?

To find out how old your heart is compared to your actual age, use our free Heart Age Test today.

Our free online Heart Age Test will quickly reveal your heart age, and how to lower it, as well as ways to reduce your risk of heart attack or stroke.

It's simple to use and usually takes around three minutes, so you can do it on the move. Of course, the more information you provide, the more accurate your results will be.

WHAT'S YOUR BLOOD PRESSURE AND WHY DOES IT MATTER?

Blood pressure is one of the many factors that affect your heart age.

1 in 4 adults in the UK has high blood pressure, which is the leading cause of heart attacks and strokes. Most people have no symptoms of high blood pressure, which is why it is important to get tested.

Your blood pressure is the pressure of the blood in your arteries. You need a certain amount of pressure to keep your blood moving, but if it's too high, you're more at risk of serious health problems such as heart attacks, strokes and certain types of dementia.

Knowing your blood pressure is important, ask your local pharmacy for more information.
